

The transpondersystem

Every rider gets a transponder from the organisation.

You get them together with your bodynumbers in an envelope.

We have related the transponders on your bodynumber as much as possible.

The transponder you get for each rider must be fastened on the frontfork as low as possible with tieribs.

The transponder will give a signal on the line so we will have an extra control on the results of the race on the computer.

The (Eickhof)eliminationsystem

Before starting the eliminationraces your riders have to pick up a pager from the organisation.

The pager will be fixed on the bicyclesteer with tieribs.

The pager will be related to the bodynumbers.

When your rider has to leave the race, he/she will get a light- and soundsignal from the pager.

So they can see an hear when they are out of the race.

This system has been used at the worldchampionchips and the Olympic Games by the UCI.

We use it as well with all eliminationraces, just to show the riders how this system works.

See in the list: elimination

Please will you inform your riders about those systems?
